

I am a active Amateur Radio Operator, (kb5kjn). I do not believe allowing HF signals to travel and radiate over the local grids is warranted. I have read several articles from Japan where BPL is in use and I could not find a single good thing any Amateur had to report.

Even though Amateur Radio is a Hobby for me, I still believe in keeping all systems prepared for emergency communications. If I could no longer operate in the casual way (due to constant interference from BPL), what reason do I have for keeping my equipment and skills up. What reason does any Amateur Operator?

Thank you for your time.

William Jones
